**SUBJECT:** Chiller ROI Mobile App

## Purpose

Starting a new construction project comes with a variety of complex decisions; one of the most important decisions being the selection of a chiller. Choosing the right one is crucial — there are multiple factors to consider and the consequences can be far-reaching and expensive.

A main consideration is the return on investment, or ROI. The goal is to purchase a chiller that delivers significant energy cost savings in the long run — savings that help pay for the initial investment in the chiller itself. High-efficiency chillers can have a payback time as fast as two to three years, and then continue to deliver energy savings over their lifetime.

Introducing ChillerROI, a free mobile app that helps you compare chiller solutions and decide on the best long-term investment. By using ChillerROI at the start of the chiller-selection process, you can make a wise investment with long-running benefits. You just need to enter a few key pieces of information, such as chiller efficiency data, local electrical rates, and initial cost. The app then compares the data and displays it on an easy-to-read graph that you can export and share.

## Summary

Danfoss Turbocor has introduced a new app to help customers compare chillers to decide the best long-term investment. The app can be downloaded in Google Play and iTunes store.

## Action Required

ChillerROI is available for download for free on Google Play and the iTunes Store now.

Download ChillerROI (Google Play)
